Rulemaking 23-12-008
(Filed December 14, 2023)

**REPLY COMMENTS OF THE VEHICLE-GRID INTEGRATION COUNCIL ON THE
PROPOSED DECISION ADOPTING REVISED DATA GATHERING AND
REPORTING REQUIREMENTS FOR TRANSPORTATION ELECTRIFICATION
PROGRAMS AND PROVIDING CLARIFICATION ON PROGRAMS ADOPTED IN
DECISION 22-11-040**

In accordance with the Rules of Practice and Procedure of the California Public Utilities Commission (“Commission”), the Vehicle-Grid Integration Council (“VGIC”) hereby submits these reply comments on the *Proposed Decision Adopting Revised Data Gathering and Reporting Requirements for Transportation Electrification Programs and Providing Clarification on Programs Adopted in Decision 22-11-040* (“PD”) issued by President Alice Reynolds on October 27, 2025.

I. INTRODUCTION.

VGIC appreciates the opportunity to submit these reply comments on the PD. VGIC supports the Commission’s efforts to refine transportation electrification (“TE”) reporting requirements and ensure that customer-facing programs are designed and administered effectively. In these reply comments, VGIC responds to opening comments from the investor-owned utilities (“IOUs”) with the following:

- The Technical Assistance (“TA”) Program should be IOU-Administered with flexible budgets and timelines.

II. THE TECHNICAL ASSISTANCE PROGRAM SHOULD BE IOU-ADMINISTERED WITH FLEXIBLE BUDGETS AND TIMELINES.

In Opening Comments, the IOUs requested that the TA program be administered individually by each utility rather than through a central program administrator, as originally envisioned in D.22-11-040.¹ VGIC agrees. The IOUs are best positioned to provide technical assistance within their own service territories, particularly given that energization appears to be a central focus of the program.² As PG&E states, “Because the utilities are closest to the work of energizing customers, they are uniquely equipped to deliver customer advising on topics related to the grid, capacity, and site energization.”³

VGIC is also concerned with the PD’s proposal to limit budget availability to a three-year period. PG&E and SDG&E both explain that expenditures will begin prior to launch for program setup and will continue after program completion for closeout activities such as reporting and evaluation.⁴ PG&E states that these program phases can last “several months,”⁵ and in VGIC’s experience, this can easily extend to a year or more depending on program complexity. While VGIC is hopeful that the IOUs can stand up these programs quickly, customers should not face artificially shortened program availability simply because administrative phases take longer than anticipated.

Instead, VGIC supports PG&E’s recommendation that “the Commission should authorize TA program spending until each IOU’s allocation of the overall program budget of \$36 million is

exhausted.”⁶ There is no compelling reason to impose a three-year limit on budget availability or program operation. These TA programs have been highly valuable for customers and given the evolving landscape of transportation electrification funding and rules, the Commission should keep the programs open until funding is fully utilized. VGIC also agrees with PG&E that once funding runs out, the utilities should be able to request additional budget via Advice Letter.⁷

III. CONCLUSION.

VGIC appreciates the opportunity to provide these comments. We look forward to further collaboration with the Commission and stakeholders on this initiative.

Respectfully submitted,

/s/ Zach Woogen
